

Sam Senani

Senior DevOps Engineer & Tech Lead

Remote EU | senanisammy@gmail.com | github.com/samlogy | linkedin.com/in/

I design and lead the platform and infrastructure behind distributed banking systems - from zero-downtime deploys and observability to on-call culture.

HIGHLIGHTS

- 45m -> 4m - reworked CI/CD and image caching across the eBank service fleet
- 99.98% uptime - SLO for a payments platform serving 2M+ requests/day
- -40% infra cost - right-sizing, spot capacity and autoscaling on Kubernetes
- 6 engineers led - grew and mentored a platform team; owned on-call design

EXPERIENCE

Platform & DevOps Lead - eBank

2023 - Present

- Architected a 12-service Spring Boot microservices platform with Docker Compose and Kubernetes, Spring Cloud Gateway and Spring Admin.
- Built observability: centralized logging, metrics and tracing, with zero-downtime deploys.
- Added a Spring AI chatbot with tool-calling and RAG over pgvector, behind the same CI/CD.

Senior DevOps Engineer - Company B

2020 - 2023

- Sole infra owner for 3 production services; introduced IaC and cut manual deploy steps to zero.
- Designed the on-call rotation and incident-response runbooks adopted across two teams.

Software / Cloud Engineer - Company C

2017 - 2020

- Migrated a legacy monolith toward microservices, coordinating rollout across two teams.
- Established the team's first automated pipeline (lint -> test -> build -> deploy).

SKILLS

Languages: Java, TypeScript, Go, Python, Bash, SQL

Infra / Cloud: Kubernetes, Docker, Terraform, AWS, Helm, Nginx / Gateway

CI/CD & Tooling: GitHub Actions, ArgoCD / GitOps, Prometheus, Grafana, OpenTelemetry, pgvector

Leadership: Tech lead & mentoring, on-call & incident response, architecture review, RFCs
